

THE SHAPE OF THE INDIRECT OBJECT IN
CENTRAL AND EASTERN EUROPE

Laura A. Janda, University of North Carolina-Chapel Hill

0.0 Introduction

A variety of dative constructions in certain Slavic and other case-marking languages of Europe are motivated as extensions of the canonical indirect object construction that uses the verb meaning 'give.' The identification of such dative case usage as extended indirect object constructions has important implications both for the description of individual languages in this area and for comparative linguistics. The present model defines the indirect object in such a way that the residue of verbs governing the dative form a semantically motivated and coherent group. A comparison of dative usage among languages in Central and Eastern Europe suggests that geographic contact plays a significant role in the development and spread of case-role conceptualization. Because Czech is both geographically central to the area under discussion and has the most highly developed array of relevant dative case usages, it will be used as the baseline for comparison with a sampling of other languages that have a morphologically distinct dative: Russian, Ukrainian, Polish, Slovak, Serbo-Croatian, Macedonian, Lithuanian, German, Romanian, and Hungarian.¹ Possible explanations for the observed areal phenomenon of extended indirect object constructions will be suggested.

1.0 Theoretical Preliminaries

In the early seventies psychologists conducted research indicating that human beings categorize ideas around central prototypes, building radially-structured networks on the basis of links that connect successively more peripheral members to the prototype (cf. Rosch 1973a & b; Mervis & Rosch 1981). On the assumption that linguistic categories *are* cognitive categories with the same properties as those observed by psychologists, a similar structure has been proposed by cognitive linguists. Thus, it has been postulated that semantically complex linguistic categories instantiate structured polysemy rather than the homonymy or partial homonymy suggested by traditional inventories of uses, or the abstract general meaning sug-

gested by structuralists. A morphologically unified category (such as a given case, for example) is also semantically unified, although the internal complexity of that category may be great. This postulate has been tested in the analysis of a number of semantically complex morphemes, among them the Russian verbal prefixes *pere-*, *do-*, *za-*, and *ot-* (Janda 1986), the genitive case of Greek (Nikiforidou 1991), and the English verb particles *over* (Brugmann 1988), *up*, and *out* (Lindner 1981).

Perhaps the most eloquent and pertinent argument for the postulation of structured polyssemy was presented by Nikiforidou (1991, 155–164), who lists phenomena that traditional and structuralist analyses do not explain satisfactorily:

- the fact that the range of meanings of a given category (e.g., the genitive) is similar across unrelated languages (explained in cognitive linguistics by the fact that such categories are based on human experience, and that the cognitive category to some extent predetermines the linguistic category);

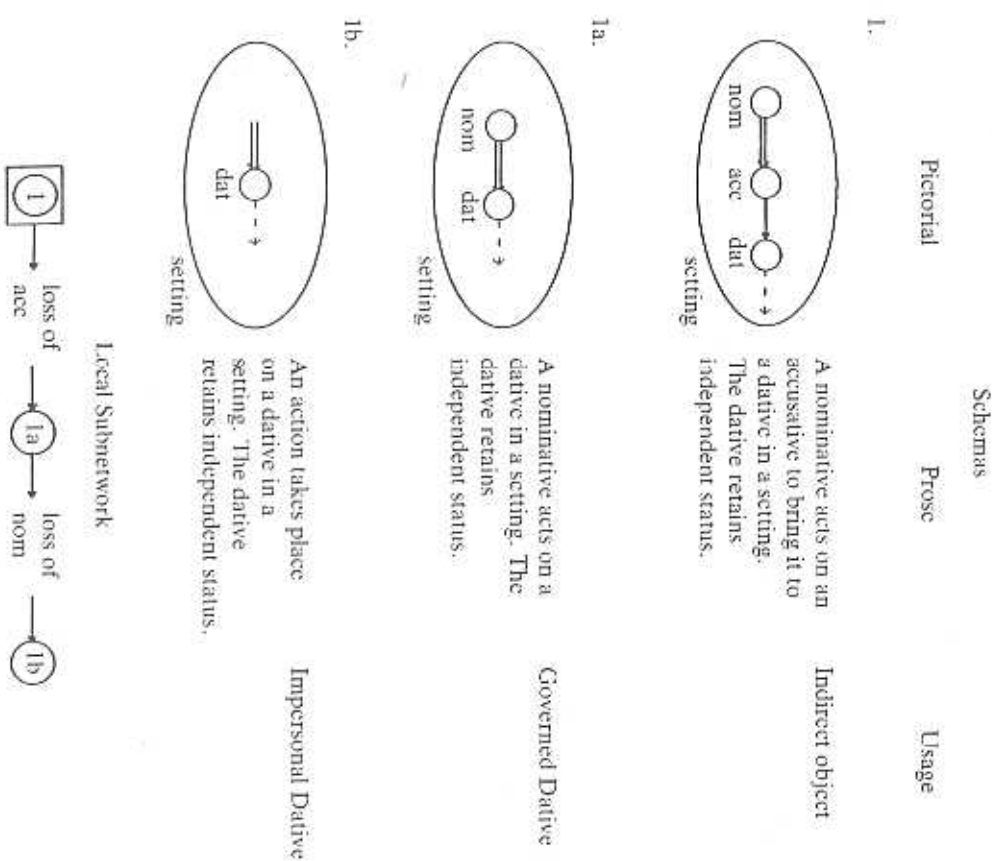

• the fact that there are central readings for a category that require no context, whereas other readings are more peripheral and do require context, and also that it is the peripheral, not the central meanings that are lost first over time when there is an erosion of the category (explained in cognitive linguistics by the center-periphery structure of the category).

The analysis below employs the structured polyssemy postulated by the authors cited above, as it is situated in the broader theoretical framework of cognitive linguistics as proposed by Lakoff (1987), Langacker (1986 & 1987), and Talmy (1986). It is also compatible with the systems of related meanings proposed for the Russian instrumental and Polish dative by Wierzbicka (1980 & 1986).

2.0 An Overview of the Dative

The many non-indirect object uses of the dative (ethical dative, dative of possession, etc., often referred to collectively as the "free dative") and the dative of impersonal constructions will be excluded from discussion, for they do not exhibit any clear-cut pattern of areal phenomena, as is the case for constructions in which the dative is an argument of the verb. However, in order to place the following analysis in its broader context, I will give a very brief account of the semantic structure of the entire dative category (which is worked out in detail in Janda [1993] for Czech and Russian, and is applicable in its gross structure to all of the Indo-European languages cited in this survey).² The indirect object construction consists of a nominative entity (subject), an accusative entity (patient), a verbal action (which transfers the accusative to the dative), and a dative entity (potential subject of further action³). The governed dative construction is identical, except that one of the participants, the accusative entity, is absent. The removal of one more participant, the nominative entity, leaves a construction with only a verb and a dative entity (potential subject): the impersonal dative. These three constructions and their relations as syntagmatic variants of the indirect object construction, are diagrammed in figure 1. The relationship that binds the indirect object construction (and its syntagmatic variants⁴) to the free dative construction (and its syntagmatic variants) is paradigmatic (i.e., the result of variation in the semantics of the dative itself, rather than of variation in the construction in which it is found). This relationship is the result of an operation on the scope of the dative, which ranges from a

Figure 1 Schema 1 and Its Syntagmatic Variants

mere potential as a subject (independent status) in schema 1 to the maximally external scope of the sphere of control in schema 2. These schemas and their relationships are diagrammed in figure 2.⁵

Schema 2, of course, has its own array of syntagmatic variants, which will not be discussed here; the focus of the remainder of this paper will be on schemas 1 and 1a. The reader should keep in mind that this brief excursus and the diagrams presented herein are to some extent convenient artifacts: the dative network is in fact very complex, including many transitional uses and relationships that have not been represented.

Figure 2 Czech Dative Network

In the analysis that follows, it will be helpful to think of the dative as a whole (represented in figure 2) as a superordinate category, which subsumes two further basic-level categories, represented as schema 1 and schema 2, each of which in turn subsumes a number of subcategories (this is diagrammed for schema 1 in figure 1). Further, the subcategories have a structure of sub-subcategories, and it is at the level of the sub-subcategory (i.e., the finer structure subsumed by schemas 1 and 1a) that the analysis below will be carried out. The organization of categories in super-, basic and subordinate levels can be easily established for lexical semantics (cf. superordinate *furniture*, basic level *chair, bed, table*, subordinate *highchair, lanuchair, rocking chair*), and the recognition of these levels is a central tenet of cognitive linguistics (cf. Lakoff 1987). Another central tenet, the assertion that lexical and grammatical semantics form a continuum (cf. Talmy 1986), sanctions the stratification of case uses invoked here.

3.0 The Indirect Object in Czech

If one identifies the three-argument construction with the verb *dávat* 'give' as illustrated in example 1 (corresponding to schema 1 in figure 1) as the prototypical instantiation of the indirect object, it becomes clear that there is a diverse set of

dative constructions that appear to be semantically motivated as extensions of the indirect object. Members of this set of constructions vary according to a) the direction of the motion of the direct object with respect to the indirect object (toward or away), b) whether the direct object has a surface realization, and c) the specification of the direct object by the verb (as identical to the subject, a message, money, benefit, punishment, etc.). In the prototypical case the direct object is moved on a path directed toward the indirect object, is realized as an accusative NP, and its nature is not specified by the verb.

1. *Hana dala Petrovi knihu.*
 Hana-NOM gave Petr-DAT book-ACC
 'Hana gave Petr a book.'

The extensions of this prototypical use of the dative in an indirect object construction are of three types, based on three kinds of relationship: extension via synonymy, extension via antonymy, and extension via metonymy. These extensions link the prototype to the more peripheral members of the cognitive category of the indirect object, forming a radial network of interconnected uses, as presented in figure 3.⁶ Note that figure 3 presents only the subcategories local to schema 1.

Synonymy is the most common type of extension; it adds a third dimension to the network given in figure 3 by allowing extension throughout the entire structure. Thus, there are many verbs that can have the same argument structure as *dávat* 'give' by virtue of the fact that they are synonymous or nearly synonymous with this verb. Examples are found in table 1 of the appendix.

The opposite type of extension, via antonymy, is utilized only once in the indirect object network. This extension, however, is responsible for establishing the branch of the network that is the main focus of this article, for this is where we see interesting variations among languages. Extension via antonymy makes it possible for the antonym of *dávat* 'give,' which is *brát* 'take,' to have the same argument structure, as in example 2, thus reversing the direction of movement of the direct object relative to the indirect object.

2. *Alena mi pořídila bere čokolady.*
 Alena-NOM me-DAT always takes chocolates-ACC

'Alena is always taking chocolates from me!'

Synonymy further facilitates the use of the dative with verbs like *krást* 'steal' and *zdržovat* 'appropriate' and other verbs listed in table 2 of the appendix. Languages that exhibit such extension via antonymy will henceforth be referred to as having "an extended indirect object."

Metonymy produces the extensions that make up the remainder of the network. Actually, what is at work here is a kind of reverse metonymy in which the naming of a part (here a part of the argument structure of the verb), to be precise, the direct object) is subsumed in the naming of the whole (the verb). In all the examples below of metonymical extension of the indirect object the semantics of the verb necessarily specify the identity of the direct object, making its surface realization unnecessary and frequently impermissible as well. These verbs typically lack a surface accusative object, and their overt argument structure is of course different from clauses containing the prototypical indirect object and its extension via anto-

although the stative 'belong' can also appear with the preposition *do* 'to' + genitive in colloquial speech:

35. *Komu/Do koho nalezyt' svit?*
Who-DAT/To who-GEN belongs world-NOM?
'To whom does the world belong?'

Intransitive taking verbs, however, combine with prepositional phrase constructions similar to those found with 'take':

36. *Vona vnikla vid mene.*
She-NOM ran-away from me-GEN.
'She ran away from me.'
37. *Itakaj meni z ocej.*
Run me-DAT from eyes-GEN.
'Get out of my sight.'

'Giving money/gifts, messages, signals, good, evil' are all constructed with dative indirect objects:

38. *Pan platiu kniazovi.*
Landlord-NOM paid prince-DAT
'The landlord paid the prince.'
39. *Materi ridiu ne kovovya.*
Mother own-DAT not spoke
'She didn't speak even to her own mother.'

40. *Mlopec' mavnuc rukaju bitijam.*
Boy-NOM waved hand-INST soldiers-DAT.
'The boy waved his hand at the soldiers.'

41. *Meni daze podobajet'ija vasa xata.*
Me-DAT very pleases-refl your house-NOM.
'I really like your house.'

42. *Von skody' tak bahato kovovyy.*
You-DAT harms so much to-talk
'It's not good for you to talk so much.'

Verbs of punishment, as in Russian, use the accusative:

43. *Ja tebe nab'ju.*
I-NOM you-ACC will-beat
'I'll give you a beating.'

5.3 Polish

All parts of the extended indirect object network are well-represented, except the verbs of punishment.¹³ As in Czech, both 'give' and 'take' use indirect objects:

44. *Mary daje pudełko siostrze.*
Mary-NOM gives box-ACC sister-DAT
'Mary gives a box to her sister.'
45. *Zabrano im broń.*
taken them-DAT weapon-ACC
'The weapon was taken from them.'

and both intransitive giving and intransitive taking verbs follow suit:

46. *Przedstawiam się Irkowi.*
introduced refl Irek-DAT
'I introduced myself to Irek.'
47. *Juz mi nie ucieknie.*
already me-DAT not will-escape
'He/She will not escape me anymore.'

Verbs denoting the giving of money/gifts, messages, signals, good, and evil also have indirect objects:

48. *Zaplatam mu.*
paid him-DAT
'I paid him.'

49. *Nie odpowiedział mi.*
not answer them-DAT
'He did not answer them.'

50. *Ukrótnem się panom.*
greeted refl women-DAT
'I greeted the women.'

51. *Czy te róże podobają się tej kobiecie?*
whether these roses-NOM please refl this woman-DAT
'Does this woman like these roses?'

52. *Ten się nęczy krząci personelowi.*
that-NOM refl bothers staff-DAT
'That one is bothering the staff.'

Verbs of punishment, however, have accusative direct objects:

53. *Uderzyłem go/ją.*
hit him/her-ACC
'I hit him/her.'

54. *Datem mu klapsa.*
gave him-DAT spank-ACC
'I gave him a spanking.'

5.4 Slovak

The use of the indirect object in Slovak very nearly matches its use in Czech. The Slovak equivalents of 'give' and 'take' have dative indirect objects:

55. *Daj mi to!*
give me-DAT it-ACC
'Give it to me!'
56. *Ukradli mi dáždnik.*
stole me-DAT umbrella-ACC
'My umbrella has been stolen.'

and intransitive giving and taking verbs have dative indirect objects as well:

57. *Predstavil sa niekomu.*
to-introduce refl someone-DAT
'To introduce oneself to someone.'
58. *Uuniklo to mojej pozornosti.*
Escaped it-NOM my notice-DAT
'It escaped my notice.'

Verbs denoting the giving of money/gifts, messages, signals, good and evil also take indirect objects:

59. *Zaplatil som chlapovi.*
paid A UX boy-DAT
'I paid the boy.'

60. *Pripomeni mi, aby som to urobil!*
remind me-DAT so-that AUX it-ACC did
'Remind me to do it!'

61. *Telefonoval som ti celý večer a nikto mi neodpovedal.*
phoned AUX you-DAT all evening-ACC and no one-NOM me-DAT not-answered
'I phoned you all evening and no one answered me.'

62. *Je ťažko každému vyhovieť.*
Is hard each-DAT to-please
'It's hard to please everyone.'

63. *Prekážaš mi v práci.*
hinder me-DAT in work-LOC
'You hinder me at work.'

With verbs denoting the giving of punishment, Slovak vacillates between accusative direct objects and dative indirect objects:

64. *Udriem/Nariekam ťa.*
hit/thrash you-ACC
'I'll hit you/thrash you.'

65. *Udriem ti jednu ruku.*
will-hit you-DAT one blow-ACC
'I'll sock you one.'

66. *Nasekám ti (na zadok).*
will-cut you-DAT (on bottom-ACC)
'I'll give you a spanking (on your bottom).'
67. *Narežem ti.*
will-cut you-DAT
'I'll give you a hearing.'

Indeed there appears to be a continuum of dative usage in West Slavic: Czech uses the dative here most readily, Polish uses it the least (only in paraphrases containing 'give'), and Slovak serves as the transition between these two systems.

5.5 Serbo-Croatian

All branches of the extended network are present in Serbo-Croatian, albeit to varying degrees. The dative appears in prototypical indirect object constructions with 'give,' as in:

68. *Možim, daj mi pet maraka po trideset dinara.*
please, give me-DAT five stamps-GEN for thirty-ACC dinars-GEN
'Please, give me five thirty dinar stamps.'

but the number of verbs meaning 'take' that admit a dative indirect object is very limited, consisting of only three examples: *uzeti* 'take,' *oteti* 'take away,' and *ugrabiti* 'seize.' There are further usage restrictions on the taking verbs. The dative generally appears only with the past tense of *oteti* and *ugrabiti*; and *uzeti* can also take the prepositional phrase *od* + GEN, in which case it connotes 'borrow' rather than 'steal.' The following examples demonstrate the variation between the dative and the *od* 'from' + genitive prepositional phrase observed with *uzeti* 'take':

69. *Uzeo je novac od nje.*
took AUX money-ACC from her-GEN
'He took the money from her.'

70. *Uzeo joj je novac.*
took her-DAT AUX money-ACC
'He took the money from her (it was her money and/or she was affected).'

The use of a dative indirect object with intransitive giving verbs is more widespread in Serbo-Croatian than in any of the other languages in this survey. Czech, for

example, uses prepositional phrases (*k* 'to' + dative, or in the case of 'home' the adverbial *domů* 'homeward') with motion verbs in equivalents of the following two examples; Czech usage would parallel that observed for Serbo-Croatian only in the third example:

71. *A sad idi majci/kuci!*
and now go mother-DAT/home-DAT
'And now go to your mother/home!'

72. *U zgodan čas prišli neprijateljskom stražaru.*
at convenient time approach-run enemy guard-DAT
'At the right moment, run up to the enemy guard.'

73. *On se skoro vratio svojim roditeljima u selo.*
he-NOM refl soon returned own parents-DAT to village-ACC
'He soon returned to his parents in the village.'

Intransitive taking verbs, however, do not use a dative indirect object:

74. *Izšao je iz kuće.*
out-went AUX from house-GEN
'He left the house.'

There are verbs denoting 'give money/gifts, messages, signals, good, evil' that combine with a dative indirect object in Serbo-Croatian:

75. *Platio mi je odmah.*
paid me-DAT AUX immediately
'He paid me immediately.'

76. *Nikome ne govori.*
No one-DAT not speak
'I'm not speaking to anyone.'

77. *Vaša ma se kuća vrlo sviđa.*
your-NOM him-DAT refl house-NOM very pleases
'He likes your house very much.'

78. *Godilo joj se.*
revolted her-DAT refl
'She was revolted.'

but there are a few verbs in these categories that combine with an accusative direct object, like:

79. *Nije vas uvredio.*
neg-AUX you-ACC harmed
'He hasn't harmed you.'

In the colloquial language there are at least two verbs denoting punishment that can take the dative, although the accusative is used in the literary language. Thus one might hear an utterance like:

80. *Čuvala/Mlamo sam mu.*
Slapped/Hit AUX him-DAT
'I slapped/hit him.'

although the use of *ga* 'him(ACC)' would be considered correct.

5.6 *Macedonian*

Macedonian generally lacks case marking on nouns and adjectives, but compensates for this by inserting the appropriate pronominal form to refer to some non-nominative noun phrases.¹⁴ Thus in a prototypical indirect object construction the direct object (*knigata* 'book-the', *cvetkinjata* 'flowers-the') is also realized as a pronoun (*ja* 'her-ACC', *gi* 'them-ACC'):

81. *Ma ja dadov knigata.*

Him-DAT her-ACC gave book-the
'I gave him the book.'

82. *I gi isporakav cvetkinjata.*

Her-DAT they-ACC delivered flowers-the
'I delivered the flowers to her.'

Verbs meaning 'take' and their synonyms have dative indirect objects:

83. *(Toj) mi go ukrade časovnikot.*

(He-NOM) me-DAT him-ACC stole watch-the
'He stole the watch from me.'

84. *(Toj) ja grabna torbata.*

(He-NOM) her-DAT her-ACC grabbed bag-the
'He grabbed her bag.'

Intransitive giving and taking verbs likewise have dative indirect objects:

85. *I se predstaviv.*

her-DAT refl introduced
'I introduced myself to her.'

86. *The pari mi pripaѓaat mene.*

this money-NOM me-DAT belong me-DAT
'This money belongs to me.'

87. *Koj mi se zagubi nožot?*

Where me-DAT refl lose knife-this
'Where did I lose this knife?'

88. *I izbegav.*

her-DAT ran-away
'I ran away from her.'

89. *Im nedostavnaat sredstva.*

them-DAT are-insufficient resources
'They are lacking resources.'

Dative indirect objects appear with verbs meaning 'give money, messages, signals, good, evil':

90. *Mu plati.*

him-DAT paid
'I paid him.'

93. *Toj ton ne mi se dopaѓa.*

that tone not me-DAT refl pleases
'That tone does not please me.'

91. *Nemu mu rekov.*

him-DAT him-DAT told
'I told him.'

94. *Toa ti vredi.*

it you-DAT benefits
'Good for you!'

92. *Mu namignav.*

him-DAT winked
'I winked at him.'

95. *Mi preči.*

me-DAT hinders
'He/she/it hinders me.'

although there are exceptions, such as:

96. *Go izlažan.*

him-ACC lied
'I lied to him.'

and there is even variation in case usage with the verb 'advise':

97. *Go posovetovav.*

him-ACC advised
'I advised him.'

98. *Mu posovetovav da oti doma.*

him-DAT advised that goes home
'I advised him to go home.'

Verbs denoting the giving of punishment do not have indirect objects:

99. *Go naprav.*

him-ACC beat
'I beat him up.'

5.7 *Lithuanian*

Both 'give' and 'take' admit dative indirect object constructions in Lithuanian:

100. *Jie mums duos mažą katiuką.*

They-NOM us-DAT will-give little kitten-ACC
'They will give us a little kitten.'

101. *Mot buvė pavogtas arklys.*

me-DAT was stolen horse-ACC
'A horse was stolen from me.'

and the indirect object is used with intransitive giving and taking verbs as well:

102. *Jis pats mums pristatė.*

He-NOM himself-NOM us-DAT introduced
'He introduced himself to us.'

103. *Aš padiaukojau Lietuvos reikalam.*

I-NOM dedicated Lithuania-GEN cause-DAT
'I dedicated myself to the Lithuanian cause.'

104. *Jam stinga pinigų.*

Him-DAT is-lacking money-GEN
'He lacks money.'

105. *Arklys man pabėgė.*

Horse-NOM me-DAT ran-away
'The horse ran away from me.'

Some verbs of communication have dative indirect objects:

106. *Jonas pasakė jo mums.*

John-NOM told us-DAT
'John told us.'

107. *Aš rašau broliui.*

I-NOM write brother-DAT
'I am writing to my brother.'

but a large number do not and take accusative direct objects instead:

108. *Mokytojas klausinėjo studentą.*

Teacher-NOM questioned student-ACC
'The teacher questioned the student.'

In most cases, however, these verbs can be paraphrased with the verb *duoti* 'give' to produce a prototypical indirect object construction:

109. *Mokytojas davė studentui klausimą.*Teacher-NOM gave student-DAT question-ACC
'The teacher asked the student a question.'

The dative indirect object is used with verbs meaning 'give money, good, evil':

110. *Aš jam sumokėjau.* 111. *Jonui patiko filmas.*I-NOM him-DAT paid John-DAT pleased movie-NOM
'I paid him.' 'John liked the movie.'112. *Jis man pakenkė.*He-NOM me-DAT harmed
'He harmed me.'

with some exceptions:

113. *Gandau erzina Mariją.*Rumor-NOM annoys Mary-ACC
'The rumor annoys Mary.'

Punishment verbs do not generally have dative indirect objects:

114. *Aš minkiau vaiką.*I-NOM spanked child-ACC
'I spanked the child.'

but note the use of an indirect object with 'give' in the meaning 'hit':

115. *Aš tau dūšiau į veidą.*I-NOM you-DAT will-give into face-ACC
'I'll hit you in the face.'5.8 *German*

German usage follows the pattern observed for Czech very closely: Both 'give' and 'take' use dative indirect objects:

116. *Sie gibt dem Kellner ein Trinkgeld.*She-NOM gives the waiter-DAT a tip-ACC
'She gives the waiter a tip.'117. *Er nahm mir meine Brieftasche weg.*He-NOM took me-DAT my pocketbook-ACC away
'He took my pocketbook away from me.'118. *Ich entziehe ihm das Recht.*I-NOM withdraw him-DAT the right-ACC
'I withdraw the right from him.'

and the intransitive giving and taking verbs follow suit:

119. *Ich bin ihm gefolgt.*I-NOM AUX him-DAT followed
'I have followed him.'120. *Es gehört mir.*It-NOM belongs me-DAT
'It belongs to me.'121. *Er entkam seinen Verfolgern.*He-NOM escaped own pursuers-DAT
'He escaped his pursuers.'122. *Das Pferd lief ihm fort.*The horse-NOM ran him-DAT away
'The horse ran away from him.'

Likewise, we find dative indirect objects with all the other extended meanings:

123. *Thomas bezahlt den Männern.*Thomas-NOM pays the men-DAT
'Thomas pays the men.'125. *Antwortet er dir?*answers he-NOM you-DAT
'Does he answer you?'126. *Ich telegraphiere/telefoniere/rufe/winke/rufe/danke/schmeichle/gratuliere ihm.*I-NOM [verb] him-DAT
'I telegraph/telephone/call/beckon to/advice/threaten/hatter/congratulate him.'127. *Er gefällt mir.*He-NOM pleases me-DAT
'I like him.'128. *Das wird Ihrer Gesundheit schaden.*That-NOM will your health-DAT harm
'That will harm your health.'129. *Er gab ihm eine große Strafe.*
he-NOM gave him-DAT a big punishment-ACC
'He punished him severely.'5.9 *Romanian*The dative is morphologically distinct for pronouns and the article in Romanian.¹⁶ Here again we see the extended indirect object used with both 'give' and 'take':130. *Vă voi da niște bani.*You-DAT I-NOM will-give some money.
'I'll give you some money.'131. *M-au furat banii.*Me-DAT have stolen money-the
'Money has been stolen from me.' 'I had money taken.'

Indirect objects can be found with intransitive giving verbs:

132. *M-am prezentat ei.*Me-refl-have introduced her-DAT
'I introduced myself to her.'134. *Mi s-a întâmplat un eveniment.*me-DAT refl-has happened an event
'An event happened to me.'133. *Ea mi s-a arătat într-un vis.*She me-DAT refl-has showed in-a dream
'She appeared to me in a dream.'but are limited to occurrence with only three intransitive taking verbs *a-î scăpa* 'escape from someone,' *a evita* 'avoid someone,' and *a lipsi* 'be lacking to someone,' as in:135. *Îi lipsește mintea/cafeaua.*him/her-DAT lacks mind-the/coffee-the
'He/She lacks commonsense/coffee.'

Otherwise the intransitive taking verbs use other constructions, as in:

136. *A fugit de la mine.*has run from me-ACC
'He/She ran away from me.'

Verbs denoting 'giving money, messages, signals' take indirect objects:

137. *M-au plănu.*me-DAT have paid.
'They have paid me.'139. *I-am telefonat.*Him/Her-DAT-have telephoned
'I telephoned him/her.'138. *Ei vă spun.*He-NOM you-DAT tells
'He is telling you.'140. *I-am făcut cu ochiul.*Her/Him-DAT-have made with eye-the
'I winked at him/her.'

Verbs denoting benefit ('giving good') have indirect objects:

141. *Mi se potrivește costumul.*Me-DAT it-REFL suits suit-the
'The suit looks good on me.'

but those denoting the opposite ('giving evil') have direct objects:

142. *Ma derânjază.*Me-ACC bothers
'He/She/It bothers me.'

Verbs denoting punishment have accusative objects, unless paraphrased with 'draw' as in:

143. *Mi-a tras o palmă.*Me-DAT-has drawn a slap
'He gave me a slap.'5.10 *Hungarian*

Here we see a different pattern, with the indirect object confined to fewer environments than in the other languages in this survey. It may well be that the underlying principles organizing dative usage are different for this language given its different genetic origin. 'Give' combines with dative indirect objects, as in:

144. *Az asszony ajándékoz egy könyvet a leányának.*the woman-NOM gives a book-ACC the her-daughter-DAT
'The woman gives a book to her daughter.'145. *Átadja az erődöt az ellenségnek.*hand-over the fortress-ACC the enemy-DAT
'He/She hands over the fortress to the enemy.'

but 'take' takes the genitive (like Russian):

146. *Eltveszi a labdát Péteről.*takes the ball-ACC Peter-GEN
'He/She takes the ball from Peter.'147. *Kölcsönkér valakitől valakitől.*borrow something-ACC somebody-GEN
'He/She borrows something from somebody.'

The fact that the dative is limited to conveying 'give' as opposed to 'take' is amply demonstrated in the following pair of examples:

148. *Elkérte a könyvet tőlem.*asked the book-ACC me-GEN
'He asked me for the book.'149. *Elkérte a könyvet a barátjának a barátja részére a barátja szándéka.*asked the book-ACC the his-friend-DAT
'He asked for the book for his friend.'

The use of the dative with intransitive giving is limited to a few verbs, such as:

150. *Úgy látnk neki.*it seems him-DAT
'It seems so to him.'

otherwise we find other cases:

151. *Megköszöni valakit.*approach somebody-ACC
'He/She approaches somebody.'152. *Valami történik valakivel.*something-NOM happens somebody-INST
'Something happens to somebody.'

Intransitive taking verbs do not have dative arguments:

153. *Megváltik valakitől valammal.*part-with someone-GEN/something-GEN
'He/She parts with someone/something.'154. *Ehúzza valakitől.*take-leave-of someone-GEN
'He/She takes his/her leave of someone.'

The dative can be found with some verbs that denote the giving of money, messages, signals, good, evil:

155. *Fizeti valakinek.*pay someone-DAT
'to pay someone'157. *isztelegni valakinek.*salute someone-DAT
'to salute someone'156. *Parancsol valakinek.*order somebody-DAT
'He/She orders someone.'158. *örömet szerezni valakinek.*joy-ACC procure someone-DAT
'to please someone.'159. *A fagy sokat arton a gyümölcsösnek.*the frost-NOM much damaged the fruit-trees-DAT
'The frost did much damage to the fruit trees.'

but there are exceptions as well as variation in some instances:

160. *tapasztal valakitől valakinek.*applaud someone-ACC/someone-DAT
'to applaud someone'161. *elősegíteni valaként valakét.*benefit someone-ACC
'to benefit someone'

Verbs denoting punishment do not admit dative indirect objects.

6.0 *Interpreting the Data*

The most interesting generalizations to be drawn from this data can be made with respect to the presence vs. absence of extensions of the indirect object via animacy. Three languages, Russian, Ukrainian, and Hungarian, lack the entire branch of the network represented by taking and intransitive taking verbs. The fact that we

Neither dialect had any /+continuous, -compact/ phenomena, and each made a decision to choose a single relevant feature. Subsequent remedial innovation made /k/ into [k] and /f/ into [f]. Andersen claims that his typology is valid at all levels of language, but does not provide examples of bifurcating morphological change. An innovation which assigns for the experiencer of 'take' either the dative or the (usually prepositional) genitive would, however, appear to qualify as a bifurcating morphological change. If we use the classic Jakobsonian system of semantic case features,¹⁸ we would be justified in assigning to the experiencer argument of 'take' the features [+directional, +quantifying], since taking necessarily involves both direction (from experiencer) and quantification (extent to which experiencer is affected). Thus an abductive innovation in ranking and feature valuation parallel to that cited from Andersen above would be responsible for the current distribution of case marking with 'take':

Each language made a decision as to which feature was relevant. Subsequent remedial innovation changed [+directional] to [+directional, +marginal] (to prevent syncretism with the other object of 'take' which was already accusative), and changed [+quantifying] to [+quantifying, -marginal] (since locative would not be appropriate).

7.2 *The Extended Indirect Object as a Relic*

It may also be that the extended use of the indirect object was present in Proto-Indo-European and has been curtailed in many modern languages, leaving behind the Sprachbund of West and South Slavic, German, and Romanian where it has been retained to varying degrees. Old Hittite, for example, evidently used the dative with taking verbs, as in:

167. *a = an = zan pine/nuaz/si kuis n = an = si = k/anf labanzzi.*
connective she-ACC refl he-kidnaps which-NOM connective she-ACC him-DAT particle they-separate.
'The one who has eloped with her, they take her away from him.'

The replacement of the extended dative with prepositional phrases could be seen as part of a general tendency to replace bare case forms with prepositional constructions, the same process which has eroded the substantival morphology of English, Bulgarian, and Macedonian, and continues to favor prepositional usage in certain constructions in other languages. The instrumental of means, for example, is losing ground to prepositional phrases in both Russian (cf. Schupbach 1986) and in Czech, where it is now possible to hear 168b:

- 168a. *Napsala jsem to tužkou.*
Wrote AUX it-ACC pencil-INST
'I wrote it with a pencil.'
- 168b. *Napsala jsem to s tužkou.*
Wrote AUX it-ACC with pencil-INST
'I wrote it with a pencil.'

Further, in Polish there is a very strong tendency to replace much of the indirect object usage with prepositional phrases in *do* + genitive:

169. *Ojciec mi pisze o trudnej sytuacji w Polsce.*
father-NOM me-DAT writes about difficult situation-LOC in Poland-LOC
'Father writes to me about the difficult situation in Poland.'

—but—

170. *Ojciec do mnie pisze.*
father-NOM to me-GEN writes.
'Father writes to me.'

8.0 *Conclusion*

The intent of this article, however, is not to establish a definitive history for dative usage in central Europe, but rather to show that such comparisons are possible and that the suggested model is justified. What is most curious about the geographic distribution outlined in figure 4 is the lack of correlation in places between this isogloss and family relationships. In this sample, languages in the same Slavic subfamily behave similarly, but they also reflect the usage common to the region in which they are found, a factor apparently not tied to genetic relatedness alone. This observation carries with it a significant implication: that geographic proximity plays a role in the development of argument structure and how it is conceptualized. Further, conceptual structures are clearly transmissible among languages. In essence, what figure 4 shows us is that there are some languages in which Z in utterances meaning 'X takes Y from Z' is conceptualized as merely a source point (Russian, Ukrainian, Hungarian), and other languages that conceptualize Z as an experiencer of an action analogous to C in utterances meaning 'A gives B to C'. Barring extremely diverse historical conditions (as in the case of Hungarian), languages that are geographically contiguous tend to share conceptual structures.

I have proposed a model of case usage that posits internal structure for the semantics of cases. This model thereby breaks down the mass of data on case usage into logically interrelated units, or branches of a network. When data can be viewed in such a systematic fashion, interlinguistic comparison is facilitated. Comparison of usage points to the importance in language development of dimensions of space, in addition to time-anchored genetic relationships. Additionally, the model allows for both a clearer definition of case roles and a more systematic treatment of governed case.

NOTES

1. Thus this study includes: a) those languages contiguous to Czech that have morphological case expression, b) languages that are contiguous to those in a) and have morphological case, and c) Macedonian. I must express thanks to my friends and colleagues who assisted me in preparing the comparative data: Charles Carlton, Predrag Čičovacki, Paul Dehreczeny, Lawrence Feinberg, George Fowler, Victor Friedman, Sandra Golopentia, Darka Hawryshkiw, Henrieta Huzucha, Elzbieta Kapnińska, Ananas Klimas, Craig Melchert, Vasa Mihailovich, Klára Papp, Vesséka Palmer, Maria Pavlovsky, Ireneusz

- Sipkowiec-Hicks, Ljupco Stefanovski, Josef Weisbaum. I, however, remain responsible for any errors made in gathering and interpreting this data.
- 2 For an account of the dative in German in the framework of cognitive linguistics, see Smith 1985 & 1987.
- 3 The designations "potential subject" and "independent status" will be explained below in the digression on the governed dative under the heading "Advantages of the Extended Indirect Object Model," p. 539.
- 4 Here, "syntagmatic variation" refers to variation in the basic structure of a construction. The following syntagmatic variants are relevant here, and correspond to the diagrams in figure 1: 1) a three-argument construction with a verb, a nominative argument, an accusative argument, and a dative argument; 1a) a two-argument construction with a verb, a nominative argument, and a dative argument; and 1b) a one-argument construction with a verb and a dative argument. Syntagmatic variation is a distinction secondary to that of paradigmatic variation, which is explained in the text.
- 5 The difference between the indirect object in schema 1 and the free dative in schema 2 can be illustrated by the following examples in Russian:
- indirect object: *Jvan podaril nam plastinku*. 'Jvan gave us a record.'
free dative: *Jvan otkryl nam dver'*. 'Jvan opened the door for us.'
- In the indirect object construction, the dative is an obligatory argument of the verb, the accusative entity is transferred to the dative entity which has the potential to react to this situation. Neither of these statements is true for the free dative construction.
- 6 A number of dative constructions in Czech were first identified as extensions of the indirect object in Janda 1993. For a discussion of radial categories in the framework of cognitive grammar, see Lakoff 1987.
- 7 Another possible interpretation of example 2 is: "Alena is always taking my chocolates!" There is some overlap between this extension of the indirect object and another part of the semantic network of the dative, namely the part that includes dative usage traditionally labelled "dative of possession." Whereas the use of the dative with verbs meaning 'give' signals an action which usually results in the dative referent becoming the possessor of an object, possession is a necessary precondition in a clause with the opposite semantic import. Before something can be taken away it must be possessed in some sense. The relationship between this extended indirect object and the dative of possession is discussed in greater detail in Janda 1993; cf. also the discussion of this phenomenon in Friedman 1977.
- 8 Here I make reference both to textbooks and to descriptive grammars of Czech, such as Havranek and Jedlicka 1960, Heim 1982 and Šmilauer 1972.
- 9 Bachman gives extensive evidence of the subject-like capacities of the dative in Russian. The first test of subjecthood that he applies is the use of *svoy* 'one's own,' which can have a subjective dative as its antecedent as in (Bachman 1980:94):
- Ne žil' se mne v svoem dome*. 'There's no living in my own house.'
- Mac xorošo rabotaetsja v svoem kabine*. 'I work well in my office.'
- Bachman shows that datives also serve as antecedents for *sebya* 'oneself' and for gerunds and that they behave just as do nominative subjects in topic-controlled deletion, adverbial clause reduction, and comparative reduction.
- 10 Some authors have suggested that the dative is somehow marked for "humanness"; cf. Bělovlá (1982:67) identifies a semantic feature of the dative as *personhood* 'personhood,' and Greenberg (1974:25) shows that the vast majority of dative marking in Russian is on nouns denoting persons and personal pronouns. The ability of animals to function as datives in such utterances is questionable. Wierzbicka (1986:396-397) gives the Polish example *Pomówił mi Rex* 'I pointed Rex's kennel for him' and states that it "sounds odd because it implies that Rex (a dog) wished for the kennel to be

- painted." Personhood lies at one extreme of the animacy hierarchy, and the interaction of painted with the semantics of the dative is complex. Note that it is also possible to place inanimates (in particular abstract nouns) in the indirect object position in sentences like the Russian: *Razvinija tekstura i literaturny v našej strane ne prišlaťsja opromu zračenie*. 'Great significance is not attached to the development of art and literature in our country.'
- 11 This classification of the interaction between nominative and dative arguments of the verb is in some sense an extrapolation of that suggested by Andersen (1977). Note that animality of domination is a natural gap in this group. The oppressed are always trying to escape their oppressors, but rarely, if ever, is the converse true. Note also that there is just one verb that can be considered a dative-governor but cannot be categorized among those named in this paragraph, nor can it be said to have an extended indirect object. That verb is *zavideť* 'envy,' and the use of the dative with it is motivated by the assumption of possession. For more on this verb and its role in the semantics of the dative case, see Janda 1993.
- 12 The term "emotional dative" is translated from Grepl and Karfik 1986. Note also that the use of the dative of possession in Russian is generally associated with a negative evaluation by the speaker, cf. Levine 1984 and 1986.
- 13 There is, however, a strong tendency to use prepositional phrases instead of the dative in the extended uses.
- 14 Pronouns are inserted for definite direct objects and for all indirect objects. Moreover, specific direct objects can trigger this phenomenon as well.
- 15 This semantic extension of 'give' to 'hit' is not unique to Lithuanian. The same phenomenon is observed, for example, in Romanian, and it is similar to English usage as in: *Now we'll give it to you!* 'Now we'll hit you!'
- 16 Romanian also has a doubled dative which is used with certain intransitive giving and taking verbs, as in *a-i oparea în vre curea* 'to appear to someone in a dream.'
- 17 Note, however, that the use of the dative indirect object with verbs of taking and intransitive taking is part of the grammar of Kabarevous (or "official") Greek, but this feature has been lost in the modern vernacular.
- 18 Here I am assuming the "original" six-case system of Russian, which leaves out the marginal I2 and G2, selected by Chvany (1980, 111) as the most appropriate two-dimensional conflation model.

	indct	dir/ascr	quant	
-mar/per	NOM	ACC	GEN	
+mar/per	INST	DAT	LOC	
	where mar/per = marginal/peripheral, indct = indefinite, dir/ascr = directional/descriptive, quant = quantifying.			

APPENDIX

Although I have tried to include most relevant verbs, the lists in the tables below are intended to be illustrative rather than exhaustive. There are a few verbs that appear on more than one list, either because they have more than one meaning or because their case usage is motivated by more than one use of the dative. *Hrozit* 'threaten' has two distinct meanings: 'to utter a threat,' classified among the verbs of giving messages, and 'to behave in a threatening manner,' classified among the verbs of harm (giving evil). The use of the dative with *prekážet*

'hinder, interfere' is motivated by both the meanings of harm and symmetrical context present in the verb.

Table 1: Synonyms of Czech *dávat* 'give'

podávat	'hand'	odevzdávat	'hand in'
nabízet	'offer'	dodávat	'add'
předkládat	'serve, place before'	předávat	'hand'
přisunovat	'draw toward'	donukovat	'deliver'
stíkat	'push toward'	odvádět	'turn over, return'
cpat	'thrust upon'	postupovat	'surrender'
vnucovat	'force upon'	světlovat	'put in (someone's) custody, care'
přihřívát	'pass'	vracet	'return'
prezentovat	'present'		

Table 2: Synonyms of Czech *brát* 'take'

odnímat	'take'	šmáznout	'swipe'
krást	'steal'	šlounout	'pinch'
zabavovat	'seize'	štipnout	'pinch'
vát	'wrest from'	uzmout	'take away'
thát	'yank away'	zctizovat	'appropriate'
škubat	'wrench away'	vyláštřovat	'expropriate'
výfouknout	'snatch away'		

Table 3: "Intransitive giving" and "Intransitive taking"

nadřhnat	'catch up to, overtake'	ujíždět	'ride away from'
přiblížovat se	'approach'	utíkat	'run away from'
představovat se	'introduce self to'	ucházet	'escape'
odvádět se	'devote self to'	unikat	'escape, leak'
vénovat se	'dedicate self to'	uprchat	'hee, escape'
obětovat se	'sacrifice self to'	scházet	'be missing'
světlovat se	'entrust self to'	chybět	'be lacking'
parit	'belong to'	vyhýbat se	'avoid'
přislouct	'belong to, be owed to'	vymýkat se	'get away from'
stačit	'be enough, suffice'	zřít se	'get lost on'
připadat	'happen to, seem to'	vzdalovat se	'alienate self from'
slavat se	'happen to'	odtzívat se	'alienate self from'
přiházet se	'happen to'	odrozovat se	'defect'
zdát se	'seem to, appear to'	odrdát	'outgrow'
jevit se	'be evident to'	schovávat se	'hide from'
zapřodávat se	'sell out to (as a traitor)'		

Table 4: Metonymical extensions of *dávat* 'give'

prševědčovat	'consent'	plátit	'pay'
lichotit	'flatter'	obětovat	'sacrifice'
pochlebovat	'tawn upon'	přispívat	'contribute'
přínáskovat	'pay lip service to'		
poroučet	'command'		

messages or signals

money or gifts

nařizovat	'order, direct'		
děkovat	'thank'		
přizvukovat	'second'		
přát	'wish'		
blahopřát	'wish well'		
poroučet se	'give regards to'		
žehnat	'bless'		
gratulovat	'congratulate'		
kondolovat	'give condolences'		
radit	'advise'		
promiřet	'forgive'		
připomínat	'remind'		
spílat	'abuse, call names'		
nadávat	'abuse, tell off'		
zlostřit	'curse'		
hrozit	'threaten'		
modlit se	'pray'		
rouhat se	'blaspheme'		
chubit se	'boast'		
žalovat	'complain'		
odporučet se	'take one's leave of'		
odpovídat	'answer'		
lhat	'lie'		
volat	'call'		
telefonovat	'telephone'		
lykat	'say <i>ty</i> to'		
vykat	'say <i>vy</i> to'		
saluovat	'salute'		
přikývovat	'nod to, consent'		
teskat	'applaud'		
kynout	'wave'		
mávat	'wave'		
smát se	'laugh at'		
signalizovat	'signal'		
telegrafovat	'telegraph'		
písat	'write'		

Table 5: Governed dative

podobat se	'be similar'	oručit	'be a slave to'
rovnat se	'equal'	zapřodávat se	'sell out to'
odpovídat	'correspond to'	sloužit	'serve'
vyrovnat se	'compete with'	pomáhat	'help'
konkurvat	'compete with'	asistovat	'assist'
překážet	'interfere with'	odvádět se	'devote self to'
bránit	'prevent, resist'	vénovat se	'dedicate self to'
odmlouvat	'contradict, talk back'	obětovat se	'sacrifice self to'
odporovat	'oppose'	podklázat	'know to'
oponovat	'object to'	podklouvat	'toady to'
vzpírat se	'defy'	podvádět se	'give in to'

subordination

protiviti se	'oppose, rebel'	podrobovat se	'submit to'
		podřizovat se	'conform to'
		vzdávat se	'surrender to'
		parfit	'belong to'
	domination	přislušet	'be owed to'
vládnout	'govern'	věštovat se	'entrust self to'
vévodit	'rule over'	náležet	'belong to'
dominovat	'dominate'	holdovat	'pay homage to'
předsedat	'chair'	propadat	'become subject to'
učarovat	'bewitch, captivate'	podléhat	'succumb to'
imponovat	'impress'	povolovat	'give in to'
poroučet	'command'	novel	'give in to'
tešit se	'enjoy, have at one's disposal'	přiznávat se	'conform to'
		ustupovat	'yield to'
	annulment of subordination	klanět se	'bow to'
		dvorit se	'court'
		vyhovovat	'accommodate'
odolávat	'stand up to'	zavděčovat se	'ingratitude self'
vzpírat se	'oppose, resist'	vděčit	'be indebted to'
protiviti se	'oppose, rebel'	důvěřovat	'trust'
vzdorovat	'defy, resist'	stranit	'side with'
odplácet	'repay, reimburse'	věřit	'believe'
mslit se	'take revenge on'	rozumět	'understand'
kompenzovat se	'repay'	divit se	'be surprised by'
vynýkat se	'wrench loose from'	podřizovat se	'be awed by'
		obdivovat se	'admire'

REVIEW ARTICLE

Nelleke Gerritsen. *Russian Reflexive Verbs: In Search of Unity in Diversity*. Studies in Slavic and General Linguistics, vol. 15. Amsterdam and Atlanta, GA: Rodopi, 1990. xii + 322 pp., Hfl 90,-/\$45.00 (paper).

The purpose of *Russian Reflexive Verbs (RRV)* is to find a single invariant meaning of the postverbal affix *-sja*, which will unify and explain its many diverse uses: "reflexive", "middle", "passive", "impersonal", etc. Hence the book's subtitle. Gerritsen attempts to formulate a definition of *-sja* that is more specific than those proposed heretofore. Certain invariant meanings previously ascribed to *-sja*, such as "derived intransitivity" or "valence recession", she argues, are merely syntactic corollaries of the semantic account offered here. Her discussion of many related grammatical problems (e.g. passivity, causativity, impersonality) is helpful and informative, and her treatment of the Russian data, with over 400 illustrated examples, is quite comprehensive. The book is valuable for its close and insightful semantic analysis of the various *-sja* constructions, and for its effort to relate its findings to competing accounts by Russian, American and European scholars. Whether Gerritsen has successfully met her objective of finding a satisfactory unitary meaning for *-sja* is another matter. The author takes some bold conceptual initiatives that are not entirely convincing, despite the fact that the end result is a coherent and rather elegant classificational scheme.

RRV consists of a brief introduction, twelve chapters, a classificational scheme of *-sja* constructions, a bibliography, and an index of all *-sja* verbs (henceforth *Vsja*) discussed. The book is divided into two parts. Part I, "Personal *-sja* constructions", is comprised of Chapters 1-6. Part II, "Impersonal *-sja* constructions", is comprised of Chapters 7-12. Due to space limitations, this review will concentrate on Part I.

Chapter 1, "One or more *-sias*", rejects the notion that there could be several homonymous *-sias*, a notion that Gerritsen claims is implied by the typical treatment of *Vsja*: "Traditionally, Russian reflexive verbs . . . are divided into several unrelated groups according to the presumed meanings of *-sja*, the only generally recognizable feature detectable in all occurrences of *-sja* being 'intransitivity . . . ' (1). In contrast to this approach, Gerritsen seeks to make a case for invariance. She operates from the premise that, until proven otherwise, one form has one meaning. She therefore views the diverse uses of *-sja* as contextual interpretations of one invariant meaning which has yet to be adequately defined.

Chapter 2, "Interpretational types of *-sja*", presents two hypotheses based on Gerritsen's earlier published work. The first hypothesis is that "*-sja* assigns an extra role to the subject of the verb it is attached to" (5). This hypothesis is based in part on a comparison of *Vsja* with transitive V. In transitive constructions such as *Машинка мыет одежду* or (in an emphatic or contrastive context) *Машинка мыет себя*, there are two participants and two roles: the subject is an Agent and the direct object is a Patient. By contrast, in a "proper reflexive" construction such as *Машинка моетса*, there is only one participant—the subject—which Gerritsen regards as having the two roles of Agent and Patient, e.g. The boy is washing himself). Gerritsen assumes the proper reflexive to be the prototypical interpretation, the one which lies at the basis of all the others, and therefore provides the clearest clue to the invariant meaning of *-sja*. Her principal proposal, then, is to take the idea of the double role of
